[The Well-Trained Mind: A Guide to Classical Education at Home \(Fourth Edition\)](#) Feb 13 2021 Is your child getting lost in the system, becoming bored, losing his or her natural eagerness to learn? If so, it may be time to take charge of your child’s education—by doing it yourself. The Well-Trained Mind will instruct you, step by step, on how to give your child an academically rigorous, comprehensive education from preschool through high school—one that will train him or her to read, to think, to understand, to be well-rounded and curious about learning. Veteran home educators Susan Wise Bauer and Jessie Wise outline the classical pattern of education called the trivium, which organizes learning around the maturing capacity of the child’s mind and comprises three stages: the elementary school “grammar stage,” when the building blocks of information are absorbed through memorization and rules; the middle school “logic stage,” in which the student begins to think more analytically; and the high-school “rhetoric stage,” where the student learns to write and speak with force and originality. Using this theory as your model, you’ll be able to instruct your child—whether full-time or as a supplement to classroom education—in all levels of reading, writing, history, geography, mathematics, science, foreign languages, rhetoric, logic, art, and music, regardless of your own aptitude in those subjects. Thousands of parents and teachers have already used the detailed book lists and methods described in The Well-Trained Mind to create a truly superior education for the children in their care. This extensively revised fourth edition contains completely updated curricula and book lists, links to an entirely new set of online resources, new material on teaching children with learning challenges, cutting-edge math and sciences recommendations, answers to common questions about home education, and advice on practical matters such as standardized testing, working with your local school board, designing a high-school program, preparing transcripts, and applying to colleges. You do have control over what and how your child learns. The Well-Trained Mind will give you the tools you’ll need to teach your child with confidence and success.

[An Answer Key to A Primer of Ecclesiastical Latin](#) Nov 05 2022 This long-awaited volume provides an answer key to the drills and exercises contained in each of the units of John F. Collins's bestselling A Primer of Ecclesiastical Latin. Written for those charged with the responsibility of teaching the Latin of the church, the primer aims to give the student--within one year of study--the ability to read ecclesiastical Latin. Thirty-five instructional units provide the grammar and vocabulary, and supplemental readings offer a survey of church Latin from the fourth century to the Middle Ages. Included is the Latin of Jerome's Bible, of canon law, of the liturgy and papal bulls, of scholastic philosophers, and of the Ambrosian hymns.

ABOUT THE AUTHOR: John R. Dunlap is a senior lecturer in classics at Santa Clara University, where he has taught Latin, Greek, and classical literature for more than 30 years.

A Primer on Scientific Programming with Python Jan 15 2021 The book serves as a first introduction to computer programming of scientific applications, using the high-level Python language. The exposition is example and problem-oriented, where the applications are taken from mathematics, numerical calculus, statistics, physics, biology and finance. The book teaches "Matlab-style" and procedural programming as well as object-oriented programming. High school mathematics is a required background and it is advantageous to study classical and numerical one-variable calculus in parallel with reading this book. Besides learning how to program computers, the reader will also learn how to solve mathematical problems, arising in various branches of science and engineering, with the aid of numerical methods and programming. By blending programming, mathematics and scientific applications, the book lays a solid foundation for practicing computational science. From the reviews: Langtangen ... does an excellent job of introducing programming as a set of skills in problem solving. He guides the reader into thinking properly about producing program logic and data structures for modeling real-world problems using objects and functions and embracing the object-oriented paradigm. ... Summing Up: Highly recommended. F. H. Wild III, Choice, Vol. 47 (8), April 2010 Those of us who have learned scientific programming in Python "on the streets" could be a little jealous of students who have the opportunity to take a course out of Langtangen's Primer." John D. Cook, The Mathematical Association of America, September 2011 This book goes through Python in particular, and programming in general, via tasks that scientists will likely perform. It contains valuable information for students new to scientific computing and would be the perfect bridge between an introduction to programming and an advanced course on numerical methods or computational science. Alex Small, IEEE, CISE Vol. 14 (2), March /April 2012 "This fourth edition is a wonderful, inclusive textbook that covers pretty much everything one needs to know to go from zero to fairly sophisticated scientific programming in Python..." Joan Horvath, Computing Reviews, March 2015

Spanish for Children Mar 29 2022 Imagine having an energetic and passionate Spanish teacher walk right into your home and sit down to teach your students. That can virtually happen when children learn with Spanish for Children author Julia Kraut on the corresponding DVD and Chant CD set. Pronunciation will become a breeze and don't be surprised to hear even your youngest children picking up the catchy chants and songs. Each lesson (average length 15 minutes), corresponds to the weekly chapter in the Primer, and features Julia and her students chanting their weekly grammar charts and vocabulary, with visual images of the words. Following the vocabulary lesson, Julia Kraut carefully and thoroughly explains Spanish grammar, with the goal of teaching students to create their own sentences, and express exactly what they need to say, rather than simply mimicking common phrases.
