Clinical Sleep Medicine Dec 25 2021 "The importance of sleep for well-being and general and mental health is increasingly being recognized. Sleep complaints are commonly associated with mental disorders and are even part of the diagnostic criteria for some of them, such as mood and anxiety disorders and PTSD. The relationship between sleep and psychiatric disorders is intertwined and, in some cases, bidirectional. Anxiety, psychosis, and depression often result in reduced sleep quality (sleep fragmentation, experience of unpleasant, unrefreshing sleep), quantity (increased or reduced), or pattern (changes in sleep schedule, loss of sleep consistency). Reciprocally, sleep disorders can contribute to the exacerbation of psychiatric symptoms and independently affect the prognosis. Finally, most psychotropic drugs have an effect on sleep and arousal and can aggravate a preexisting sleep abnormality. This book aims to familiarize readers with current knowledge on the mutual effects of sleep and mental health and provide an integrated framework for students, clinicians, and researchers. Throughout its 18 chapters, it discusses the six main categories of sleep disorders: insomnia (Chapters 3-5), hypersomnia (Chapters 6-7), sleep-disordered breathing (Chapters 8-11), circadian disorders (Chapters 12-13), parasomnia (Chapters 14-16), and sleep-related movement disorders (Chapters 17-18)"--

Methods And Applications Of Nonlinear Dynamics Feb 01 2020 The present volume on Methods and Applications of Nonlinear Dynamics arose mainly from lectures given at the First International Course on Nonlinear Dynamics, which took place in Medellin, Colombia, on 1-5 September 1986. The aims of the Course were to discuss some of the fundamental theoretical ideas of modern nonlinear dynamics and their application to selected areas of physics, and also to help the participants to bridge the gap between textbook presentations and the contemporary research literature. The lectures were intended for and delivered to a PhD-level audience composed of physicists and mathematicians. They were not primarily intended for experts, but rather for scientists interested in performing experimental or theoretical research on nonlinear dynamical phenomena occurring in real physical systems.
