Urban Europe Apr 14 2021 Statistical information is an important tool for analysing changing patterns of urban development and the impact that policy decisions have on life in our cities, towns and suburbs. *Urban Europe - statistics on cities, towns and suburbs* provides detailed information for a number of territorial typologies that can be used to paint a picture of urban developments and urban life in the EU Member States, as well as EFTA and candidate countries. Each chapter presents statistical information in the form of maps, tables and figures, accompanied by a description of the policy context and a set of main findings. The publication is broken down into two parts : the first treats topics under the heading of city and urban developments, while the second focuses on the people in cities and the lives they lead. Overall there are 12 main chapters, covering : the urban paradox, patterns of urban and city developments, the dominance of capital cities, smart cities, green cities, tourism and culture in cities, living in cities, working in cities, housing in cities, foreign-born persons in cities, poverty and social exclusion in cities, as well as satisfaction and the quality of life in cities.

From Counterculture to Cyberculture Mar 14 2021 In the early 1960s, computers haunted the American popular imagination. Bleak tools of the cold war, they embodied the rigid organization and mechanical conformity that made the military-industrial complex possible. But by the 1990s—and the dawn of the Internet—computers

started to represent a very different kind of world: a collaborative and digital utopia modeled on the communal ideals of the hippies who so vehemently rebelled against the cold war establishment in the first place. From Counterculture to Cyberculture is the first book to explore this extraordinary and ironic transformation. Fred Turner here traces the previously untold story of a highly influential group of San Francisco Bay-area entrepreneurs: Stewart Brand and the Whole Earth network. Between 1968 and 1998, via such familiar venues as the National Book Award-winning Whole Earth Catalog, the computer conferencing system known as WELL, and, ultimately, the launch of the wildly successful Wired magazine, Brand and his colleagues brokered a long-running collaboration between San Francisco flower power and the emerging technological hub of Silicon Valley. Thanks to their vision, counterculturalists and technologists alike joined together to reimagine computers as tools for personal liberation, the building of virtual and decidedly alternative communities, and the exploration of bold new social frontiers. Shedding new light on how our networked culture came to be, this fascinating book reminds us that the distance between the Grateful Dead and Google, between Ken Kesey and the computer itself, is not as great as we might think.

European language policy Jul 18 2021 Die Beiträge dieses Sammelbandes, die auf eine gleichnamige Konferenz im Juni 2002 an der Universität Würzburg zurückgehen, behandeln die Probleme der Europäischen Sprachenpolitik aus verschiedenen Perspektiven. Zum einen wird die Europäische Dimension dieser für die Europäische Union hochbrisanten Frage aus dem Blickwinkel der Europäischen Kommission und der Mitgliedsstaaten betrachtet. Zum anderen werden die regionalen Aspekte und die Funktionen der Sprache, insbesondere des Englischen, auf der kommunikativen Ebene, der bildungspolitischen, juristischen, arbeitspraktischen und sprachenpolitischen Ebene analysiert. Insbesondere werden auch neueste neurophysiologische und behavioristische Forschungsergebnisse mit Bezug auf den Spracherwerb einbezogen. Auch der frühe Fremdspracherwerb wird im Gegensatz zum Mutterspracherwerb ausführlich behandelt. Den Band schließt die "Würzburger Erklärung zur Europäischen Sprachenpolitik" ab, in der sich die Experten einvernehmlich für den Ausbau der Plurilingualität in der Europäischen Union aussprechen. Den Beiträgen, die vornehmlich in der englischen, aber auch in der deutschen und französischen Sprache abgefasst sind, sind kurze Zusammenfassungen in den jeweils anderen Sprachen beigelegt, so dass den Lesern auf jeden Fall die Hauptgedanken der Beiträge nahegebracht werden.

Access to Resources Aug 26 2019 The urban environment is in a constant state of change, a constant state of "becoming. Each period in history has had its specific driving forces for change and corresponding solutions for directing change towards the city imagined and desired at that time. But our current era differs

dramatically from earlier epochs as it faces seemingly overwhelming forces like the depletion of fossil fuels and climate change with their unforeseen impacts on the urban. Through the framework of the scenario-thinking and research carried out within the Resources programme at the Royal Institute of Art in Stockholm, this book embarks on a journey of understanding contemporary urban transformations in three cities - Shanghai, Los Angeles and Pune - each representing not only three major world economies, but three specific urban contexts. Looking beyond the crunch of climate change and depleting fossil fuels, the book brings together a multidisciplinary group of major thinkers and hopeful picture of an urban future in common.

Applied Business Statistics Sep 27 2019 Applied Business Statistics: Methods and Excel-based applications (second edition) is an introductory Statistics text written specifically for Management students who require an understanding of the role of Statistics in analysing business data in fields such as Marketing, Finance, Human Resources, Production and Logistics. The primary focus of this text is to empower management students with statistical decision making skills so that they become active participants rather than passive observers in business situations where statistical findings are reported and discussed as part of a management decision making process. The text is divided into three major sections: „h exploratory data analysis „h statistical inferences, and „h statistical modelling. Each section focuses on a different role of Statistics as a decision support tool. Emphasis is therefore placed on: „h the data requirements for the

various techniques and issues of data quality, identifying likely application areas through numerous illustrative examples, noting the limitations of techniques for decision analysis, and the valid management interpretation of statistical findings. A new feature of this edition of Applied Business Statistics is the use of computer software such as Excel to perform statistical analysis. Excel's statistical capabilities are illustrated through numerous worked examples found

in the text. Students are given the opportunity to familiarize themselves with Excel's statistical capabilities by applying them to data sets of business problems, which are available on the accompanying CD. Students can monitor their learning with the help of the exercises at the end of every chapter. Each statistical technique is developed through business-related worked examples drawn from the author's diverse work experiences as a statistical consultant. In this way, a student can readily grasp the basic concept of the

technique as well as see how it would be applied in practice. This combination of method and application should prove helpful to both student and lecturer. With a working knowledge of Excel, students can become managers who are able to design and conduct their own statistical analysis in the workplace. Applied Business Statistics is therefore accessible to all students, as only a basic level of mathematical ability is required to work through this book.
