Sustainability and the Rights of Nature in Practise Jun 06 2020 *Sustainability and the Rights of Nature in Practice* is the much-needed complementary volume to *Sustainability and the Rights of Nature: An Introduction* (CRC Press, May 2017). The first book laid out the international precursors for the Rights of Nature doctrine and described the changes required to create a Rights of Nature framework that supports Nature in a sustainable relationship rather than as an exploited resource. This follow-up work provides practitioners from diverse cultures around the world an opportunity to describe their own projects, successes, and challenges in moving toward a legal personhood for Nature. It includes contributions from Nepal, New Zealand, Canadian Native American cultures, Kiribati, the United States and Scotland, amongst others, by practitioners working on projects that can be integrated into a Rights of Nature framework. The authors also tackle required changes to shift the paradigm, such as thinking of Nature in a sacred manner, reorienting Nature's rights and human rights, the conceptualization of restoration, and the removal of large-scale energy infrastructure. Curated by experts in the field, this expansive collection of papers will prove invaluable to a wide array of policymakers and administrators, environmental advocates and conservation groups, tribal land managers, and communities seeking to create or maintain a sustainable relationship with Nature. Features: Addresses existing projects that are successfully implementing a Rights of Nature legal framework, including the difference it makes in practice Presents the voices of practitioners not often recognized who are working in innovative ways towards sustainability and the need to grant a voice to Nature in human decision-making Explores new ideas from the insights of a diverse range of cultures on how to grant legal personhood to Nature, restrain damaging human activity, create true sustainability, and glimpse how a Rights of Nature paradigm can work in different societies Details the potential pitfalls to Rights of Nature governance and land use decisions from people doing the work, as well as their solutions Discusses the basic human needs for shelter, food, and community in entirely new ways:

in relationship with Nature, rather than in conquest of it

Marine Genetic Resources, R&D and the Law 1 Jan 14 2021 Advances in research and development reveal the immense diversity and potential of marine genetic resources. Under international law, no specific regime applies to these complex and paradoxical objects of use. The Law of the Sea Convention sets a framework that is partly inadequate for this new category of resources. The Biodiversity Convention and the Nagoya Protocol only address the genetic resources of national areas. Patents allow their holder to exercise a monopoly on exploiting biotechnological creations to extensive claims, questioning the common nature of biodiversity and related knowledge. They hinder research and the objectives of biodiversity law. The legal and practical rules of physical and functional access vary in geometry. They focus on the valorization of research results, crystallizing conflicts of interest between suppliers and users. Sustainable research and development is essential to the knowledge and protection of marine biodiversity. The qualification of marine genetic resources in common, standard contractual tools, distributed research and development infrastructures, negotiation of an agreement on sustainable use and conservation of biodiversity beyond the limits of national jurisdiction, would To remove these inconsistencies.

Evolution-adjusted Tumor Pathophysiology: Sep 21 2021 Combined modularized therapies for metastatic cancer are pointing to central problems of communication among 'systems participators'. A communication theory explains 'social engineering', endogenously induced or by implementing non-normative boundary conditions. Evolution-adjusted tumor pathophysiology is borne by an evolution theory, which contrasts narrative evolution histories. The tool of rationalizations constituting the tumor's normativity (inflammation, immune response etc.) represents the non-genomic counterpart of the tumor genome and should be additionally assessed during tumor staging. Evolution-adjusted tumor pathophysiology allows implementing applied systems biology, a novel clinical and pharmaceutical technology for bioengineering tumor response and personalizing tumor therapy.

Combined modularized therapy, evolution-adjusted tumor pathophysiology, and 'universal' biomarkers concertedly address genetically based tumor heterogeneity.

The Living World Apr 28 2022 Harnessing new enthusiasm for Nan Shepherd's writing, The Living World asks how literature might help us reimagine humanity's place on earth in the midst of our ecological crisis. The first book to examine Shepherd's writing through an ecocritical lens, it reveals forgotten details about the scientific, political and philosophical climate of early twentieth century Scotland, and offers new insights into Shepherd's distinctive environmental thought. More than this, this book reveals how Shepherd's ways of relating to complex, interconnected ecologies predate many of the core themes and concerns of the multi-disciplinary environmental humanities, and may inform their future development. Broken down into chapters focusing on themes of place, ecology, environmentalism, Deep Time, vital matter and selfhood, The Living World offers the first integrated study of Shepherd's writing and legacy, making the work of this philosopher, feminist, amateur ecologist, geologist, and innovative modernist, accessible and relevant to a new community of readers.

Evolutionary Neuroscience Oct 23 2021 Evolutionary Neuroscience is a collection of articles in brain evolution selected from the recent comprehensive reference, *Evolution of Nervous Systems* (Elsevier, Academic Press, 2007). The selected chapters cover a broad range of topics from historical theory to the most recent deductions from comparative studies of brains. The articles are organized in sections focused on theories and brain scaling, the evolution of brains from early vertebrates to present-day fishes, amphibians, reptiles and birds, the evolution of mammalian brains, and the evolution of primate brains, including human brains. Each chapter is written by a leader or leaders in the field, and has been reviewed by other experts. Specific topics include brain character reconstruction, principles of brain scaling, basic features of vertebrate brains, the evolution of the major sensory systems, and other parts of brains, what we can learn from fossils, the origin of neocortex, and the evolution of specializations of human brains. The collection of articles will be interesting to anyone who is curious about how brains evolved from the simpler nervous systems of the first vertebrates into the many different complex forms now found in present-day vertebrates. This book would be of use to students at the graduate or undergraduate levels, as well as professional neuroscientists, cognitive scientists, and psychologists. Together, the chapters provide a comprehensive list of further reading and references for those who want to inquire further. • The most comprehensive, authoritative and up-to-date single volume collection on brain evolution • Full color throughout, with many illustrations • Written by leading scholars and experts

Possessed Child Narratives in Literature and Film Mar 04 2020 This book undertakes a study of the trope of possessed child in literature and film. It argues that the possessed child is fundamentally an American phenomenon which, first, may be traced to the Calvinist bias of the US as a nation founded on Puritanism and, second, to the rise of Catholicism in that country, to which Puritanism owes its origins.
