Secret Projects of the Luftwaffe - Vol 1 - Jet

Fighters 1939 -1945 Dec 03 2020 Germany's

air ministry was quick to grasp the potential of

the jet engine as early as 1938 and by 1939

several German aircraft manufacturers were

already working on fighter designs that would

utilize this new form of propulsion. Rocket

engines too were seen as the way of the future

and companies were commissioned to design

fighters around them. As the Second World War

began, the urgent need to bring these advanced new types into production saw a host of innovative aircraft designs being produced which would eventually result in Messerschmitt's Me 262 jet fighter and the Me 163 rocket-propelled interceptor. And as the war progressed, efforts were increasingly made to find better ways of utilizing jet, rocket and latterly ramjet engines in fighter aircraft. Aviation companies from across Germany set their finest minds to the task and produced some of the most radical aircraft designs the world had ever seen. They proposed rotating wing ramjet fighters, arrowhead-shaped rammers, rocket-firing bat-winged gun platforms, sleek speed machines, tailless flying wings, tiny mini

fighters and a host of others ranging from deadly looking advanced fighters to downright dangerous vertical launch interceptors. Secret Projects of the Luftwaffe Volume 1: Jet Fighters 1939-1945 by Dan Sharp, based on original research using German wartime documents, offers the most complete and authoritative account yet of these fascinating designs through previously unseen photographs, illustrations and period documentation from archives around the world.
