Competition, Innovation and the Microsoft Monopoly: Antitrust in the Digital Marketplace Feb 20 2022 Do the antitrust laws have a place in the digital economy or are they obsolete? That is the question raised by the government's legal action against Microsoft, and it is the question this volume is designed to answer. America's antitrust laws were born out of the Industrial Revolution. Opponents of the antitrust laws argue that whatever merit the antitrust laws may have had in the past they have no place in a digital economy. Rapid innovation makes the accumulation of market

power practically impossible. Markets change too quickly for antitrust actions to keep up. And antitrust remedies are inevitably regulatory and hence threaten to `regulate business'. A different view - and, generally, the view presented in this volume - is that antitrust law can and does have an important and constructive role to play in the digital economy. The software business is new, it is complex, and it is rapidly moving. Analysis of market definition, contestibility and potential competition, the role of innovation, network externalities, cost structures and marketing channels present challenges for academics, policymakers and judges alike. Evaluating consumer harm is problematic. Distinguishing between illegal conduct and brutal - but legitimate - competition is often difficult. Is antitrust analysis up to the challenge? This volume suggests that antitrust analysis `still works'. In stark contrast to the political rhetoric that has surrounded much of the debate over the Microsoft case, the articles presented here suggest neither that Microsoft is inherently bad, nor that it deserves a de facto exemption from the antitrust laws. Instead, they offer insights - for policymakers, courts, practitioners, professors and students of antitrust policy everywhere - on how antitrust analysis can be applied to the business of making and marketing computer software.

Artificial Intelligence in Design '92 Jan 10 2021 Design has now become an important research topic in engineering and architecture. Design is one of the keystones to economic competitiveness and the fundamental precursor to manufacturing. The development of computational models founded on the artificial intelligence paradigm has provided an impetus for current design research. This volume contains contributions from the Second International Conference on Artificial Intelligence in Design held in June 1992 in Pittsburgh. They represent the state-of-the-art and the cutting edge of research and development in this field. They are of particular interest to researchers, developers and users of computer systems in design. This volume demonstrates both the breadth and depth of artificial intelligence in design and points the way forward for our understanding of design as a process and

for the development of computer-based tools to aiddesigners.

Putting the Urban Poor on the Map Feb 29 2020 "This publication presents a methodology for participative informal settlement upgrading with the support of information technology, the result of research and development activities carried out by UNCHS (Habitat) and a group of partners. Examining a number of experiences in the field, and through direct support to specific tool development activities, Habitat aims to consolidate a wealth of practical and field experiences into a methodological framework. The methodology refers to the project preparation phase, including community involvement protocols, and the information management system related to it. This methodology should be seen as a practical reference framework for programme managers and officials involved in designing and managing settlement upgrading projects and should assist policy makers and external support agencies in policy formulation and resource allocation. It will also provide a technical background to the Global Campaigns for Secure Tenure and for Good Urban Governance that UNCHS (Habitat) is launching in the year 2000"--p. 3.

Photorealistic Rendering Techniques Sep 17 2021 This book contains the final versions of the proceedings of the fifth EUROGRA PHICS Workshop on Rendering held in Darmstadt, Germany, between 13-15 June 1994. With around 80 participants and 30 papers, the event continued the successful tradition of the previous ones establishing the event as the most im portant meeting for

persons working on this area world-wide. After more than 20 years of research, rendering remains an partially unsolved, interesting, and challenging topic. This year 71 (!) papers have been submitted from Europe, North America, and Asia. The average quality in terms of technical merit was impressive, showing that substantial work is achieved on this topic from several groups around the world. In general we all gained the impression that in the mean time the technical quality of the contributions is comparable to that of a specialised high-end, full scale conference. All papers have been reviewed from at least three members of the program committee. In addition, several colleagues helped us in managing the reviewing process in time either by supporting additional reviews, or by assisting the members of the committee. We have been very happy to welcome eminent invited speakers. Holly Rush meier is internationally well known for her excellent work in all areas of rendering and gave us a review of modelling and rendering participating media with em phasis on scientific visualization. In addition, Peter Shirley presented a survey about future rends in rendering techniques.
