[Electrical Engineer's Reference Book](#) Jul 29 2019 [Electrical Engineer's Reference Book](#), Fourteenth Edition focuses on electrical engineering. The book first discusses units, mathematics, and physical quantities, including the international unit system, physical properties, and electricity. The text also looks at network and control systems analysis. The book examines materials used in electrical engineering. Topics include conducting materials, superconductors, silicon, insulating materials, electrical steels, and soft irons and relay steels. The text underscores electrical metrology and instrumentation, steam-generating plants, turbines and diesel plants, and nuclear reactor plants. The book also discusses alternative energy sources. Concerns include wind, geothermal, wave, ocean thermal, solar, and tidal energy. The text then looks at alternating-current generators. Stator windings, insulation, output equation, armature reaction, and reactants and time-constraints are described. The book also examines overhead lines, cables, power transformers, switchgears and protection, supply and control of reactive power, and power systems operation and control. The text is a vital source of reference for readers interested in electrical engineering.

America's First Network TV Censor Oct 31 2019 America's First Network TV Censor: The Work of NBC's Stockton Helffrich is a unique examination of early television censorship, centered around the papers of Stockton Helffrich, the first manager of the censorship department at NBC. Set against the backdrop of postwar America and contextualized by myriad primary sources including original interviews and unpublished material, Helffrich's reports illustrate how early censorship of advertising, language, and depictions of sex, violence, and race shaped the new medium. While other books have cited Helffrich's reports, none have considered them as a body of work, complemented by the details of Helffrich's life and the era in which he lived. America's First Network TV Censor explores the ways in which Helffrich's personal history and social class influenced his perception of his role as NBC-TV censor and his tendency to ignore certain political and cultural taboos while embracing others. Author Robert Pondillo considers Helffrich's life in broadcasting before and after the Second World War, and his censorial work in the context of 1950s American culture and emerging network television. Pondillo discusses the ways that cultural phenomena, including the arrival of the mid-twentieth-century religious boom, McCarthyism, the dawn of the Civil Rights era, and the social upheaval over sex, music, and youth, contributed to a general sense that the country was morally adrift and ripe for communist takeover. Five often-censored subjects—advertising, language, and depictions of sex, violence, and race—are explored in detail, exposing the surprising complexity and nuance of early media censorship. Questions of whether too many sadistic westerns would coarsen America's children, how to talk about homosexuality without using the word "homosexuality," and how best to advertise toilet paper without offending people were on Helffrich's mind; his answers to these questions helped shape the broadcast media we know today.

Routledge Diccionario Técnico Inglés Apr 29 2022 This collection of essays and reviews represents the most significant and comprehensive writing on Shakespeare's A Comedy of Errors. Miola's edited work also features a comprehensive critical history, coupled with a full bibliography and photographs of major productions of the play from around the world. In the collection, there are five previously unpublished essays. The topics covered in these new essays are women in the play, the play's debt to contemporary theater, its critical and performance histories in Germany and Japan, the metrical variety of the play, and the distinctly modern perspective on the play as containing dark and disturbing elements. To compliment these new essays, the collection features significant scholarship and commentary on The Comedy of Errors that is published in obscure and difficultly accessible journals, newspapers, and other sources. This collection brings together these essays for the first time.

Instrumentation Control and Automation for Waste-Water Treatment Systems Dec 26 2021 Progress in Water Technology, Volume 6: Instrumentation Control and Automation for Waste-Water Treatment Systems contains the proceedings of the International Association on Water Pollution Research Workshop on Instrumentation Control and Automation for Waste-water Treatment Systems, held in London in September 1973. Contributors review major advances that have been made in instrumentation control and automation of wastewater treatment. This volume consists of 70 chapters organized into six sections. The work of the Directorate General Water Engineering in the Department of the Environment in the UK and the Environmental Protection Agency in the United States with respect to promotion of instrumentation, control, and automation for wastewater treatment systems is first discussed. This discussion is followed by a chapter that describes the effects of water pollution legislation in The Netherlands on the selection of wastewater treatment plants and their consequences for consulting engineers regarding process, technical, and economical feasibility. A real-time water quality management system for a major river in Pennsylvania is also considered, along with effluent control and instrumentation in Europe. The chapters that follow focus on instrumentation and control problems in the design of a modern sewage works; installation of field equipment in automated process control systems; process control for biological treatment of organic industrial wastewaters; and the use of computers to control sewage treatment. This book will be of interest to authorities, planners, and policymakers involved in wastewater treatment and water pollution control.
